

What makes something INTERESTING ?

Interesting is a very curious word. It questions the very existence of everything that you love, like or feel good about.

So we have all experienced things that are interesting. We have had books on different interests of people; we also have books on how to develop an interest. *But is it a thing or an emotion to be developed? Or is it a journey of transformation to be relished through experience?*

Let's first talk about What the meaning of the word '**INTERESTING**' is.

According to google it is used in reference to something that arouses curiosity, and I agree with it. *But **WHY** are you curious about **IT** ?*

Is it because you are supposed to and in the back of your head you know that's how it is supposed to be, or is it because it appeals to you?

The word interesting is an adjective derived from the word 'INTEREST'. *The root of the word itself means to be of importance (in Latin)*. So we have the answer to why something interesting generates curiosity in you. It is because you get the feeling that it is important to you.

Now let's talk about that feeling. What is it? A flutter in the stomach, a breathless moment or a headturner? The feeling that you get is what makes it interesting **TO YOU**. something can be very interesting but it just does not give you the flutter in the tummy.

Speaking from personal experience, Physics- a very encaptivating subject for many but it simply does not make the correct paths in my brain. Where as Biology- a very confusing subjects for many but for me, it has a very generous portion of my brain; probably the perfect and cosiest spot.

The feeling that you get makes you feel good, and that is why you get the beautiful flutter which makes you feel curious, giving rise to your **INTEREST** in the activity, thing or subject.
