

Home Page Product Gallery

Site: <https://memorypoint24.de>

- **On the Home page**, We have added a **product page-like image change functionality** where users can change the gallery image by selecting navigation dots at the left side. **This was a challenging task. We have done it.**
- Also, all the functionalities of this section (gallery like image change, countdown, Available products, already sold products, average ratings) were developed by us. The **more challenging thing** here is the issue where **all the data of this page does not get changed automatically** (i.e. on order place, product qty change). We **have to clear the cache** to get the latest data. We **have solved this issue** in a proper way which was also a challenging task.
