

Hesbon maiyo

Hello! I'm passionate about making the world a better place. Programming gives me this chance because it feels like exploring an entirely new world. You are given a canvas and told to paint, without being told what to paint in most instances. The "world building" aspect of coding is addictive, to say the least. Coding is so accessible that anyone can read a book and begin to create. It is so inspiring to see the little pieces you build get put together to create something fantastic.

Coding is my new hobby and passion. As I go forward in this process, I enjoy looking back and seeing where I have been a week ago, a month ago. I realize I have just scratched the surface, but I am excited to see what new opportunities await me in the future.

I have worked for Andela as a software engineer for 9 months

Work experience

- At Andela, I worked for an apprenticeship product called Activo, an internal product that aimed at managing the Andelan Assets. I chose to join this product in order to improve my python general programming knowledge and also become a professional backend developer. I worked as an active member of the team for 3 months, after which I advanced and rejoined the team as a Technical coordinator
- I am also responsible for training and and facilitating advancement of 6 junior engineers to an intermediate level
- As a technical coordinator at Activo, I was also in charge of merging all PRs in staging as well as creating releases from staging to production.
- I have also completed a data science course in www.udemy.com . Here is a [link](#) to my certificate.

My interest is data science. I aim to help improve how humans make decisions and how algorithms optimize outcomes" I believe that data science has the power to improve the human condition by helping us investigate phenomena, acquire new knowledge and integrate previous knowledge with new ideas.

I'm also a very big fan of Marvel Cinematic Universe (MCU). I enjoy watching movies, swimming, and playing pool.
