TRIARCH DESIGNS is an architectural firm composed of technical professionals specializing in the design of residential , commercial , banks, and other projects.

We are a team of architects, engineers, and interior designers that creates solutions to every design challenges. We are passionate about delivering great service and working together so our clients benefit from the full breadth of our shared expertise. We dont only give our best but we also educate our clients as to why we came up with our recommendations. We believe that the connection with our clients is the best way to give them what they really desire.

We aim to accomplish to be design consultants to several retail, commercial, and residential projects. Bearing in our minds that design excellence is our main focus, we are ready to embrace the challenges ahead of us. We look forward to bigger , better and more successful endeavors as the new decade unfolds.

Patrick graduated from the University of Santo Tomas in 2010. He first took and passed his licensure exam in the 2013 Architecture Board Exam and has been in active practice in the construction industry ever since.

Seeking to heighten his knowledge in his field, he ventured and started his own Construction firm. After stabilizing operations and developing his construction firm into a multimillion business concern, he decided to hand over control to his business partner so that he could go back to his true passion.

He is a fan of architectural balance and believes that it is more than just a visual experience but also involves functionality and economy. This concept was also the basis of the company's core value and plays a huge role on how he runs the company.

Beyond his facade is a mind of a playful child who always seeks for adventure of new worlds where he can find more inspiration. These he translates into designs that are innovative, pioneering and unprecedented. An avid gamer and a cartoon geek at heart. He believes that soon he will become one of the well-known architects in the Philippines.

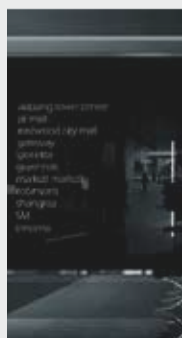

## FOREWORD

Architecture can be regarded as the symbol of progress and development for the human race. It is a reminder of how we adapted on harsh, volatile weather conditions by simply creating a formidable shelter protecting them from such.

Architecture evolves as technology and society advances. Alongside its growth is the human's desire to achieve a brighter, sustainable future and the development goals of a socio-centric environment.

Our firm used the evolution of Architecture and its balance as our main inspiration. We use this sense of constant refinement to put us on a progressive mindset to bring the best in ourselves. It has become our drive to be expressive, intuitive, and passionate with our designs. Equipped with such drive, we are prepared to face the utmost challenges, be it transforming a clutter into an art form.
