It is an alerting system which can be implemented in any fields that alerts the farmer when wild animals trespass their fields. It uses PIR motion sensor, LDR and LASER to detect the animal trespassing. Microcontroller confirms the presence of wild animals in the fields and send SMS to the former through GSM module. We used Arduino for this project.

- **MOOKHA DWANI**-Hand gesture to voice conversion system.

It is a gesture to voice conversion glove. We used flux sensor and gyroscope for detection of gestures. Microcontroller detects the gesture by collecting data from flux sensor and orientation of hand from gyroscope. Then it sends signal to the SD card module which plays the sound of corresponding gesture. We used Arduino for this project.
